

SUMMER TURN ON INDOOR WATER HOOK UP

Tools Needed: 30" Silver Drain Key
Small Screwdriver

- 1) In the yard, using the 30" silver key close the _____ drains clockwise. These are located under the silver or yellow caps in a white pipe.

- 2) Go to the Back-Flow device and turn both the blue handles and the two test cocks 1/8 turn counter clockwise (See the following page for summer on proper positions). You will need a small flat head screwdriver to turn the test cocks.

- 3) Open the main sprinkler turn on valve turning it 1/4 turn counter clockwise. The valve has a handle labeled "main sprinkler valve" and is usually located in the basement or crawl space-you will hear the water run for approximately 2-3 seconds then stop. The water is now on. If the water continues to run, repeat this procedure until it stops. Never leave the system on if you hear running water.

- 4) Go to controller and return the dial to the on position and run through each station. At this time you can reprogram the controller. If you notice a problem or have a question please feel free to give us a call at the office.
